

KIBBLED MAIZE

PRODUCT DESCRIPTION

Kibbled Maize is an energy-dense feed sourced from locally grown New Zealand maize. It provides a high starch feed that is slower to degrade in the rumen than cooked grains. It is an ideal product to blend with Palm Kernel Expeller and other safe feeds to provide a balanced, energy-dense feed option post-calving.

TYPICAL ANALYSIS

- Dry Matter 86-90%
- Energy (ME) 13-14MJ/KgDM
- Crude Protein 8-12%
- NDF 8-13%
- Starch 70-75%

note: typical analysis only, not specification.

USE AND APPLICATION

Requirements will differ depending on current diet. It is recommended you feed 0.5kg–2kg/ cow/day and use as part of a blended ration to increase starch and energy levels of the feed. Due to high starch levels, there is a risk cows could gorge and overfeed, leading to acute rumen acidosis.

STORAGE AND HANDLING

Store in a dry area, away from bird and rodent infestation.

These feeding recommendations are to be used as a guide only. Readers should not rely on these guidelines in making specific feeding decisions but should consult an appropriate nutritionist for specific total dietary approach recommendations. BHL Feeds Ltd makes no warranties that these recommendations are suitable for any particular herd or for any particular animal.
